

# SCENARIO 2 . CLOSING

All nine inside for the night, HG3 last in by the gate

|                            |                      |
|----------------------------|----------------------|
| FLAGSHIPS INSIDE           | 8                    |
| HG3, THE CARGO VEHICLE     | inside               |
| WAITING IN THE RUNWAY      | none                 |
| DOORS OPEN IN PLACE        | both, all eight      |
| DIAGONAL PITCH             | 3494 mm at 45.2 deg  |
| WORKING CLEARANCE          | 593 mm at the crates |
| DRIVE AISLE                | 2800 mm              |
| ANY ORDER, NOBODY MOVES    | no, a fixed order    |
| TIGHTEST POINT DRIVING OUT | 60 mm                |

| FLOOR MARKING SCHEDULE |                                                                          |
|------------------------|--------------------------------------------------------------------------|
|                        | <b>Black / yellow hatch</b><br>Door swing. Keep clear. 1988 mm headroom. |
|                        | <b>Yellow 100 mm</b><br>Lead-in line and traffic lane edge.              |
|                        | <b>White 75 mm</b><br>Vehicle stand outline and stand number.            |
|                        | <b>Blue 100 mm</b><br>Weighing and loading zone, cold chain.             |
|                        | <b>Green tint</b><br>600 mm working strip at every fitting.              |
|                        | <b>Red / white hatch</b><br>Fire point and electrical panel.             |

- DAILY SEQUENCE**
- Evening. The diagonal fills first, east to west: D4, D3, D2, D1.
  - Then the north rank, deepest first: N1 against the east wall, then N2, N3, N4.
  - HG3 comes in last and stands by the gate. It is first out in the morning.
  - Both doors open on all eight Flagships once they are in. HG3 has none.
  - Morning is this list read backwards: HG3 out, then N4, N3, N2, N1, then D1 to D4.

- NOTES**
- Nine vehicles inside for the night: eight Flagships and HG3. This is Warehouse Design V3 exactly as the model has it, not a redesign of it.
- The order is fixed, and it has to be. The north rank stands nose to tail with 508 mm between canopies, so it comes out shallowest first; and HG3 parks across the gate, so it moves before anything else can.
- The diagonal's doors overlap. At a 3494 mm pitch each door sweeps about 0.63 m2 over the next canopy, and the top 21 mm of the open door sits at canopy height. The leaf itself clears by 55 mm - it is the upper arm that fouls. Shutting one door lets the neighbour out; dropping that arm 25 mm would let them all stand open.
- Two clearances are short. HG3 stops 101 mm from the check-in desk, so check-in is unusable while it is parked there, and the north rank leaves 593 mm in front of the crates where 600 is wanted. The fridges are fine at 723 to 807 mm.
- Verified by driving it: every one of the nine was planned out of the gate against the others still standing, then replayed pose by pose in exact geometry. Tightest point anywhere is 60 mm.
