

SCENARIO 2 · CLOSING

Every vehicle inside for the night, HG3 last in by the gate

FLAGSHIPS INSIDE

8

ALSO INSIDE

HG3 and two HGF bikes

WAITING IN THE RUNWAY

none

DOORS OPEN IN PLACE

both, all eight Flagships

DIAGONAL PITCH

3494 mm at 45.2 deg

WORKING CLEARANCE

593 mm at the crates

DRIVE AISLE

2800 mm

ANY ORDER, NOBODY MOVES

no, a fixed order

TIGHTEST POINT DRIVING OUT

30 mm

FLOOR MARKING SCHEDULE

- Black / yellow hatch**
Door swing. Keep clear. 1988 mm headroom.
- Yellow 100 mm**
Lead-in line and traffic lane edge.
- White 75 mm**
Vehicle stand outline and stand number.
- Blue 100 mm**
Weighing and loading zone, cold chain.
- Green tint**
600 mm working strip at every fitting.
- Red / white hatch**
Fire point and electrical panel.

DAILY SEQUENCE

- Evening. The diagonal fills first, east to west: D4, D3, D2, D1.
- Then the north rank, deepest first: N1 against the east wall, then N2, N3, N4.
- HG3 comes in last and stands by the gate. It is first out in the morning.
- The two HGF bikes ride in and park in the north-west corner, nose east.
- Morning is this list read backwards: the bikes, HG3, then N4 to N1, then D1 to D4.

NOTES

- Eleven vehicles inside for the night: eight Flagships, HG3 and the two HGF bikes. This is Warehouse Design V3 exactly as the model has it, not a redesign of it.
- The order is fixed, and it has to be. The north rank stands nose to tail with 509 mm between canopies, so it comes out shallowest first; and HG3 parks across the gate, so it moves before anything else can.
- The diagonal's doors overlap. At a 3494 mm pitch each door sweeps about 0.63 m2 over the next canopy, and the top 21 mm of the open door sits at canopy height. The leaf itself clears by 55 mm, so it is the upper arm that fouls. Shutting one door lets the neighbour out; dropping that arm 25 mm would let them all stand open.
- The two bikes are 572 mm apart and 651 mm across the handlebars, so as drawn the bars overlap by 78 mm. Below bar height they are 97 mm apart and fine. Space them 700 mm, or stagger one 300 mm along the wall.
- N4 and HG3 park over 0.9 and 0.6 square metres of the check-in zone, and HG3 stops 101 mm short of the zone's south edge. That costs nothing overnight and everything if anyone works late.
- Verified by driving it: all eleven were planned out of the gate against the others still standing, then replayed pose by pose in exact geometry. Tightest point anywhere is 30 mm, on the bike that parks nearest the north wall.
