FLOOR MARKING SCHEDULE

- Black / yellow hatch**
Door swing. Keep clear. 1988 mm headroom.
- Yellow 100 mm**
Lead-in line and traffic lane edge.
- White 75 mm**
Vehicle stand outline and stand number.
- Blue 100 mm**
Weighing and loading zone, cold chain.
- Green tint**
600 mm working strip at every fitting.
- Red / white hatch**
Fire point and electrical panel.

DAILY SEQUENCE

- Four Flagships on the diagonal at 45 degrees, 3494 mm apart along the row.
- A fifth stands nose-west against the east wall, and the farm vehicle west of the crates.
- Five more outside: one in the workshop bay and four in the yard, doors shut.
- Read straight out of the Rhino model of 8 Sep: every axle centre and heading
- comes from the vehicle's own three wheels, nothing fitted or rounded.

NOTES

- Five Flagships inside plus the farm vehicle, ten Flagships in the fleet. This is your layout as the model has it, not a redesign of it.
- The gate is blocked. The farm vehicle's body reaches $v = 5693$ and the gate opening ends at 7650, so 1957 mm is left where a Flagship needs 2028. Move it about 300 mm south and the building works: with it out of the way, all five inside vehicles drive out in any order.
- Both doors will not open. At 3494 mm on a 45 degree row each door passes 0.63 m² into the next vehicle's body; both doors open needs 4600 mm at that angle, which is 1106 mm more per stand. D4 and N1's doors overlap by 0.11 m² as well.
- Three vehicles stand inside a 600 mm working strip: D1 is 359 mm from Fridge 2, D2 is 279 mm from the crate rack, and the farm vehicle is 314 mm from the office. N1's body is 60 mm off the east wall.
- The model shows both doors open on the four yard vehicles too. Drawn here with them shut, as instructed.
